1. General Information

Ewebot – SEO and Marketing Agency WordPress Theme

Ewebot theme comes with beautiful modern design and is crafted specifically for marketing services like SEO, website analysis, optimization, link building, etc. The customizing process goes smoothly thanks to a powerful Elementor Page builder that allows you to make changes and observe them live right away on the website. There are 3 pre-built homepages to choose from and advances Theme Options panel allows you to customize the theme according to your needs. Create multiple Headers and assign them to different pages, showcase your services and build a powerful Blog with the ready-to-use pages.

Buy Ewebot(<https://1.envato.market/djJWY>)

2. How to Install Theme

There are several ways to install WordPress theme, we recommend using FTP but you can choose other ways. Please read more about WordPress theme installation on the official website:
http://codex.wordpress.org/Using_Themes(http://codex.wordpress.org/Using_Themes)

Upload WordPress Theme via FTP :

Step 1 – Please unzip the installable zip file that you’ve downloaded (ewebot.zip). In case, if you’ve downloaded the main zip file “**Ewebot WP.zip**”, please unzip it and use the installable one located in the following folder “Theme v...” ;

Step 2 – Upload “ewebot” theme folder to the theme directory (/wp-content/themes/) of your WordPress website using FTP. You can use any FTP client to do that;

Step 3 – Log into your WordPress dashboard and activate “ewebot” theme in **Appearance -> Themes** section;

Step 4 – At the top of the WordPress dashboard, you will see a message ‘This theme requires the following plugins...’, please install and activate all those plugins.

3. Theme Activation

To get theme auto-updates and unlock all the available theme features, you have to register your theme purchase code. To do that, please open **Theme Options -> Product Activation** and enter your Envato purchase code. If you don’t know where to find it, please read this article [https://help.market.envato.com/hc/en-us/articles/202822600-Where-Can-I-Find-my-Purchase-Code-\(https://help.market.envato.com/hc/en-us/articles/202822600-Where-Can-I-Find-my-Purchase-Code-\)](https://help.market.envato.com/hc/en-us/articles/202822600-Where-Can-I-Find-my-Purchase-Code-(https://help.market.envato.com/hc/en-us/articles/202822600-Where-Can-I-Find-my-Purchase-Code-))

During the registration, the system will set up your personal GT3 account on [https://gt3accounts.com/app/\(https://gt3accounts.com/app/\)](https://gt3accounts.com/app/(https://gt3accounts.com/app/)) automatically where you will be able to manage all your purchase codes and get dedicated support. You will receive an email with your account credentials when your account is ready. Feel free to update the password at any time.

Important: To register the theme purchase code you must have the parent theme active (not a child one).

4. How to Update Theme

Updating your WordPress theme to the latest version is highly recommended, not only because it ensures you having all the latest features, but you’ll be up-to-date with any security patches.

Auto-Update:

If you want WordPress to handle theme updates automatically you need to enable this feature in the Theme Options Panel: **Product Activation -> Enable Auto-update On/Off**.

All the future theme updates will be available in **WordPress Dashboard -> Updates**. You will also see a new version of the theme in **Appearance -> Themes** section. To install an update, please click update theme.

Important: If you’ve modified the theme files code, all those changes will be lost because the old theme files will be overwritten with the new ones. That’s why in such cases we recommend using a child theme. How to use a child theme? Please read more

here [https://www.smashingmagazine.com/2016/01/create-customize-wordpress-child-theme/\(https://www.smashingmagazine.com/2016/01/create-customize-wordpress-child-theme/\)](https://www.smashingmagazine.com/2016/01/create-customize-wordpress-child-theme/(https://www.smashingmagazine.com/2016/01/create-customize-wordpress-child-theme/))

Uploading and Replacing the Existing Theme:

Before getting started you need to back up your database and your current theme. Since we’re replacing and updating theme files, there’s a chance something could go wrong so it’s better to keep it safe and have a backup.

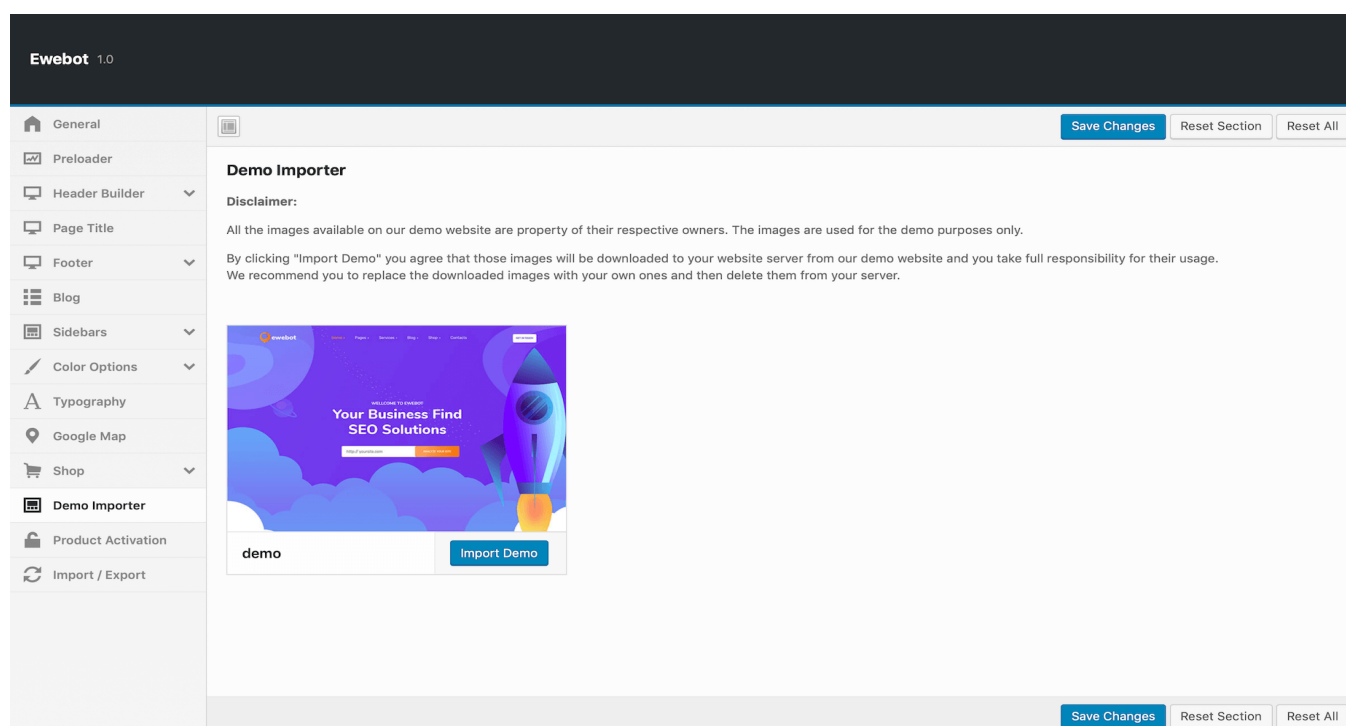

While using this method “uploading and replacing an existing theme”, please don’t go to **Appearance -> Themes**

-> **Add New** and try to upload a new version of a theme with the same name, it will fail and you'll get an error message stating that the destination folder already exists. The reason for this error is due to the fact you can't have two folders in your themes directory with identical names (obviously!)

Connect to your website via FTP or log into cPanel and delete the old theme (your website data and theme settings won't be lost, don't worry) and then upload or add a new version. Make sure that you've made a backup of the old version of the theme just in case something goes wrong.

After successful update, please log in to your WordPress dashboard and check if everything is ok. Newer versions of the plugins can be required, please update them either. If you have some questions or concerns, please contact us.

5. Import Demo Content

Main Demo Content Import:

To import demo content, please go to Theme Options Panel -> Demo Importer and import the demo content.

Once the process has been completed, please do the following (in case if the menu has not been set automatically) :

- Activate the existing menu, please go to Appearance -> Menus and select the "Main Menu", save the changes. The menu appears on your website
- To set any page as a home page please open Settings -> Reading and select the pages for "Homepage" and "Posts page"

6. Front Page Setup

Front Page Setup

Set the page for the front page. Please go to Settings -> Reading -> Front page displays -> A static page (select below) set the page for the front page and save changes.

The screenshot shows the WordPress Settings interface, specifically the 'Reading' section. On the left is a dark sidebar with a list of settings categories: Portfolio, Project, GT3 Galleries, Media, GT3 Gallery Pro, Pages, Comments, Contact, WooCommerce, Products, Elementor, Templates, Appearance, Plugins, Users, Tools, Settings (highlighted in blue), General, Writing, Reading (indicated by a red arrow), Discussion, Media, and Permalinks. The main content area is titled 'Your homepage displays' and contains the following options:

- ☐ Your latest posts
- ☒ A [static page](#) (select below)
 - Homepage: (indicated by a red arrow)
 - Posts page:

Below this, there are two input fields:

- Blog pages show at most posts
- Syndication feeds show the most recent items

Next is the 'For each article in a feed, show' section with two radio buttons:

- ☒ Full text
- ☐ Summary

The 'Search Engine Visibility' section has a checkbox labeled 'Discourage search engines from indexing this site' which is unchecked. Below it is the text: 'It is up to search engines to honor this request.'

At the bottom of the main content area is a blue button labeled 'Save Changes'.

7. WPDaddy Header & Footer Builder

(<https://wpdaddy.com/docs/wpdaddy-builder-pro/>)

The new version of Ewebot theme comes with WPDaddy Builder Pro. This plugin allows you to create custom headers and footers in Elementor. It's a front-end drag & drop visual builder.

Please read the plugin documentation here **WPDaddy Builder Pro**(<https://wpdaddy.com/docs/wpdaddy-builder-pro/>)

8. How to Edit Header

All the headers available in the theme can be managed using **WPDaddy Builder Pro**(<https://wpdaddy.com/docs/wpdaddy-builder-pro/>)

Please read the plugin documentation for obtaining information.

This is an example of how you can modify the header

All the headers are created as templates in Elementor. To view all available headers, please go to **Templates -> WPDaddy Header** in your WordPress dashboard and click "**Edit Header**".

The screenshot shows the WordPress dashboard's 'Templates' section. In the left sidebar, 'WPDaddy Builder' is highlighted at the bottom. The main content area has tabs for 'Saved Templates', 'Page', 'Section', 'GT3 Tabs', 'WPDaddy Header', and 'WPDaddy Footer'. The 'WPDaddy Header' tab is active. Below the tabs, there are filters for 'All (22)' and 'Published (22)', along with 'Bulk Actions', 'Apply', 'All dates', 'All Categories', and 'Filter'. A list of header templates is displayed, each with a checkbox and a title: 'Title', 'Empty', 'Header 01', 'Header 02', 'Header 03', 'Home 04', and 'Default'. Below each title are links: 'Edit', 'Quick Edit', 'Trash', 'View', 'Export Template', 'Edit Header', and 'Settings'. A red arrow points to the 'WPDaddy Header' tab, and another red arrow points to the 'Edit Header' link for 'Header 01'.

Once you click **“Edit Header”** you will be redirected to the Elementor page with the header available on it. You can use the Elementor functionality to modify the header.

The screenshot shows the Elementor editor interface. On the left, the 'WPDaddy Builder' sidebar is open, displaying a grid of widgets: 'Logo', 'Menu', 'Search', 'Delimiter', 'Cart', and 'Burger Sidebar'. The main canvas shows a header layout with the Ewebot logo and a navigation menu with links: 'Home', 'Pages', 'Services', 'Blog', 'Shop', and 'Contacts'. A red box highlights the widgets in the sidebar. The main canvas also shows a 'Drag widget here' prompt.

9. How to Edit Footer

All the headers available in the theme can be managed using **WPDaddy Builder**

Pro(<https://wpdaddy.com/docs/wpdaddy-builder-pro/>)

Please read the plugin documentation for obtaining information.

This is an example of how you can modify the footer

All the headers are created as templates in Elementor. To view all available headers, please go to **Templates -> WPDaddy Footer** in your WordPress dashboard and click **"Edit Footer"**.

The screenshot displays the WordPress dashboard's 'Templates' section. On the left sidebar, the 'Templates' menu item is highlighted, and a red arrow points to the 'Saved Templates' sub-item. The main content area shows a list of templates under the 'WPDaddy Footer' tab. The list includes 'Footer Home 04', 'Footer Home 03', 'Footer Home 01', and 'Footer Home 02'. A red arrow points to the 'Edit Footer' link in the actions column for 'Footer Home 01'. Above the list, there are filters for 'All (22)' and 'Published (22)', and buttons for 'Bulk Actions', 'Apply', 'All dates', 'All Categories', and 'Filter'.

Once you click **"Edit Footer"** you will be redirected to the Elementor page with the header available on it. You can use the Elementor functionality to modify the header.

10. How to Assign Header & Footer

When your header and footer are ready, you can assign them either globally to the whole website or specific page. To do that, please follow these steps.

Use it as a default header for the whole website:

Please open **WPDaddy Builder** section in your WordPress dashboard and click "**Settings**".

Header Footer Documentation Help V 1.0.1

+ Add new Please add a new header to start building.

All Headers

Title	Status	Conditions	Actions
Default	Inactive	None	Edit Settings Export
Home 04	Inactive	None	Edit Settings Export
Header 03	Inactive	None	Edit Settings Export
Header 02	Inactive	None	Edit Settings Export
Header 01	Inactive	None	Edit Settings Export
Empty	Inactive	None	Edit Settings Export

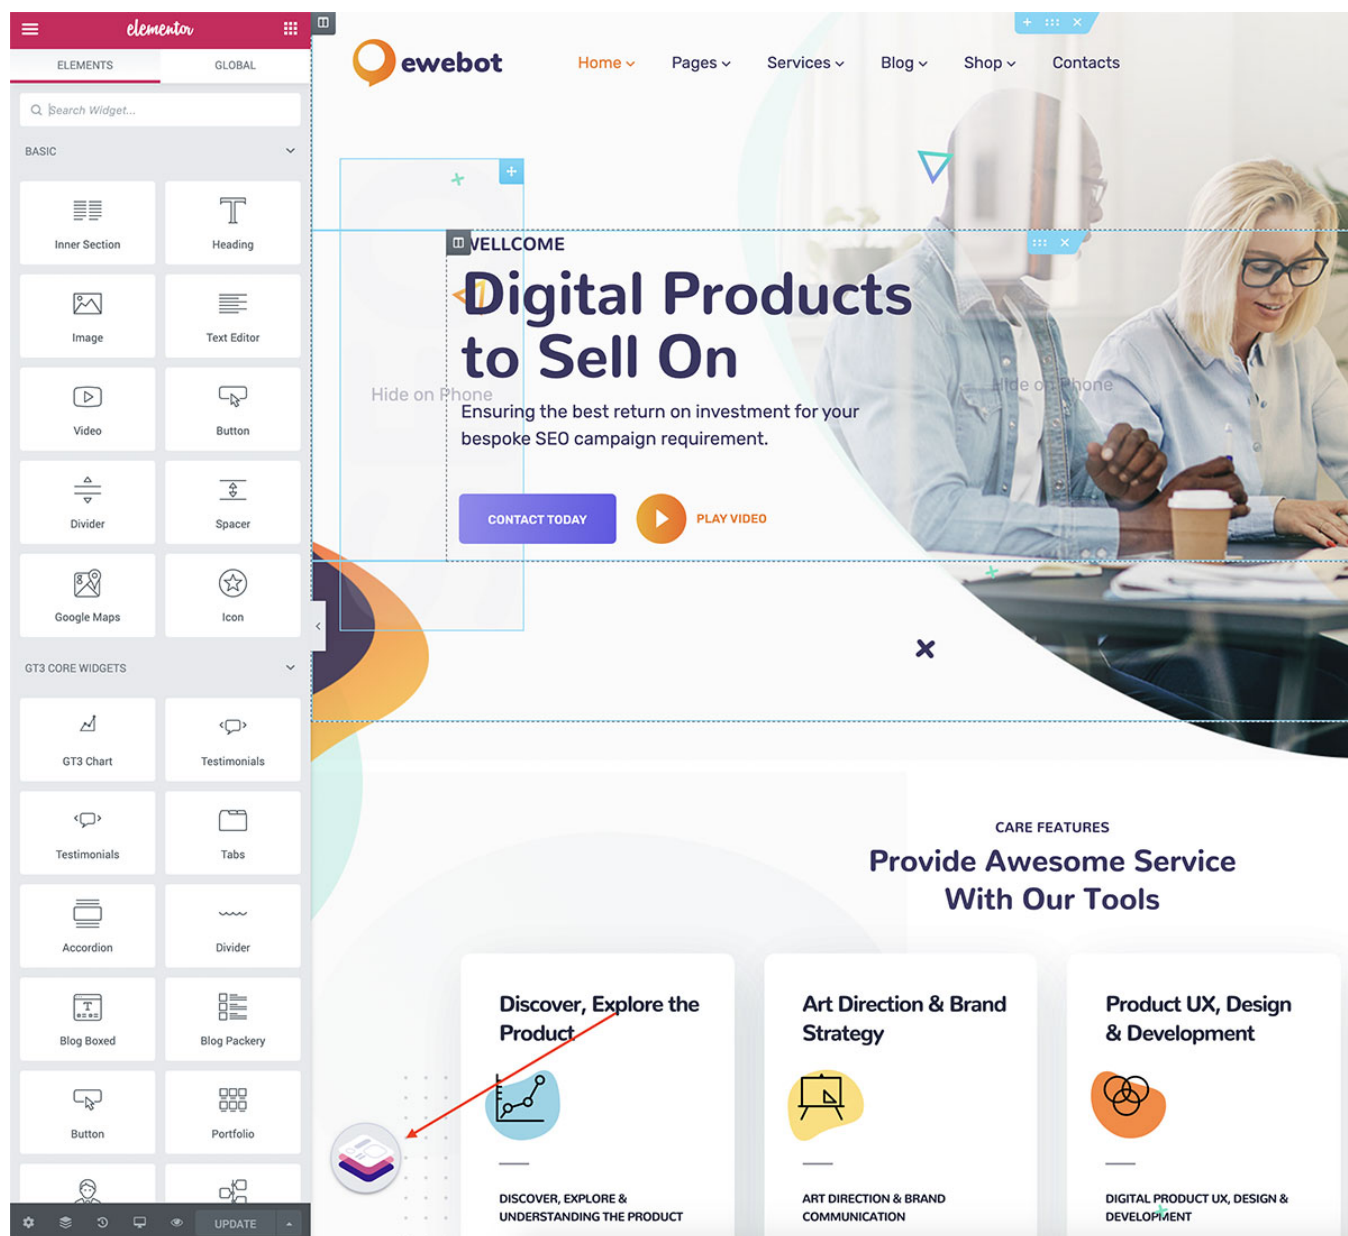

You will get a popup window with the settings for that specific header.

Make the changes and click “**Save Settings**”.

Please note: the status “active/inactive” shows the global activity. If the header is assigned to the specific page, the status will be “inactive” here.

Use the header on the specific page:

To do that please open that specific page in Elementor editor. Once it’s opened, you will see WPDaddy Builder control panel.

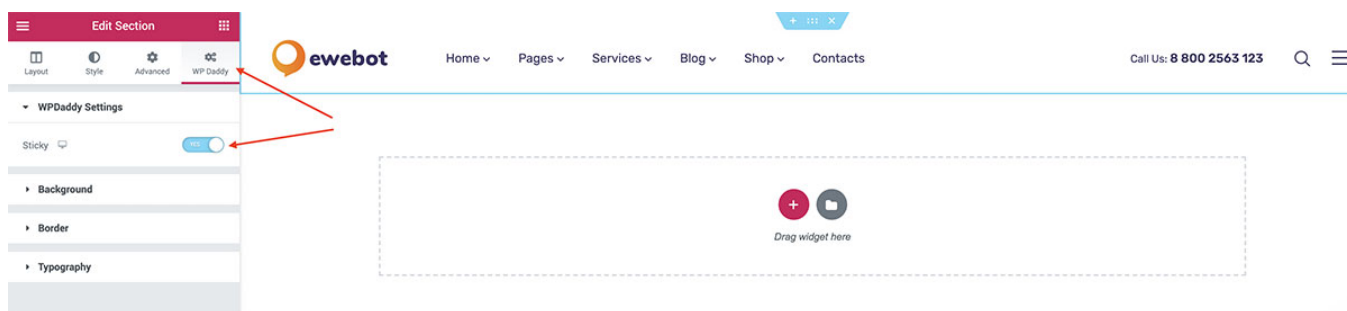

Please follow the same steps to assign footers.

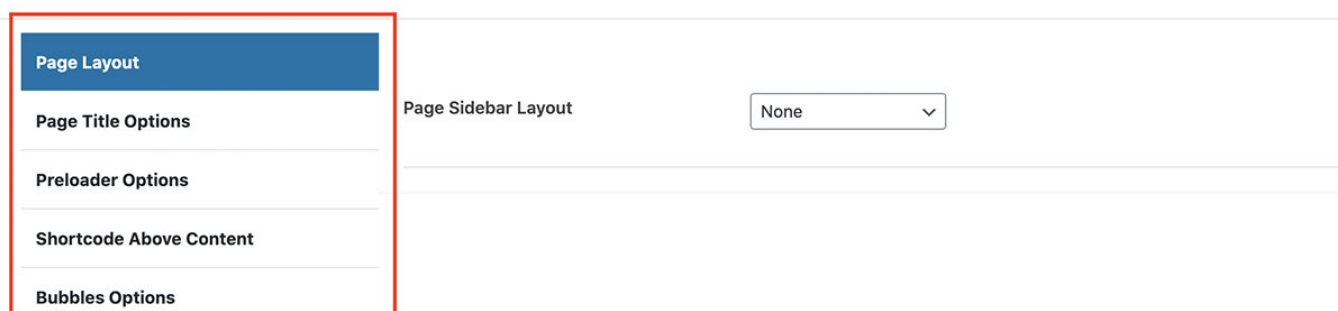

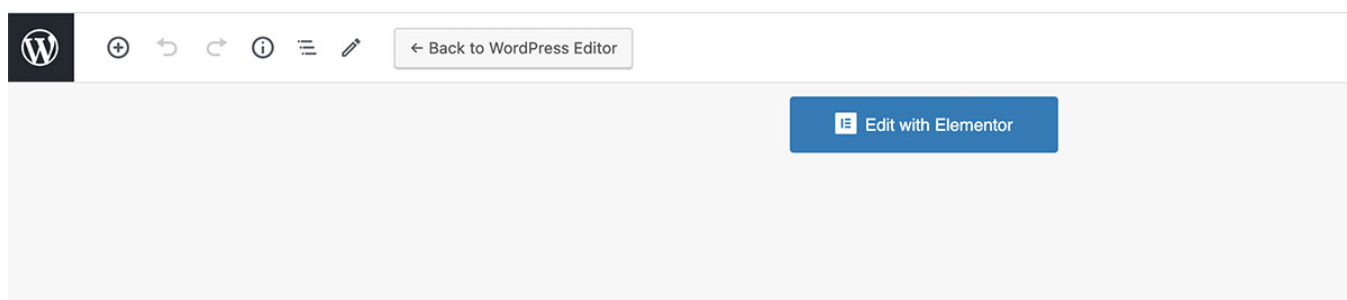

11. How to Enable Sticky Menu

To activate the sticky menu, please open the header in Elementor, select the main header section, and click “WP Daddy” tab.

You will see an option to enable the sticky menu, enable it, and set it up.

12. Page Options

Every single page has its own Page Options. You can use either the default settings available in the theme options panel or set the custom ones for every page. Please go to **Pages -> Add New**. If you scroll down the page you will see the following page options:

Page Layout: select Page Sidebar Layout;

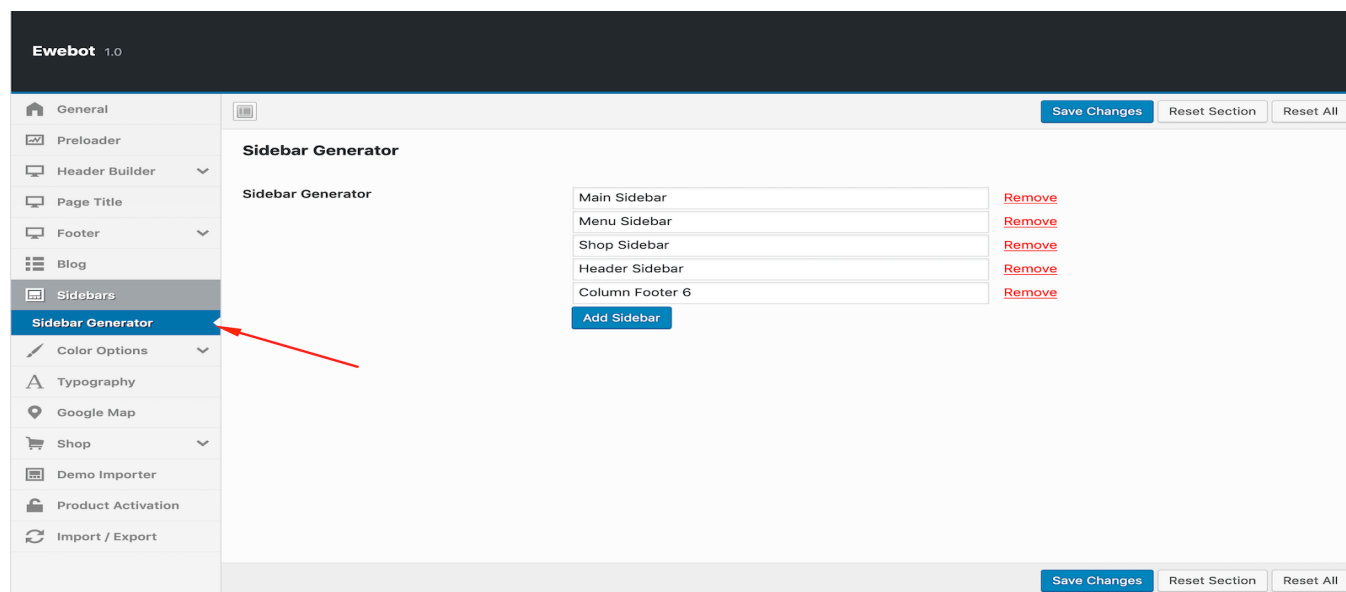

Page Title Options: adjust Title Alignment, show Page title or not, Font color and Background etc.;

Preloader Options: it allows you to use the default or custom preloader settings;

Shortcode Above Content: set a custom shortcode above the entire content;

Bubbles Options: enable animated bubbles all over the page.

13. Custom Sidebars

Please go to **Theme Options Panel -> Sidebar -> Sidebar Generator** and create a new sidebar. Don't forget to save settings. Note, Custom sidebars available only for Default Pages. If you are going to use custom templates they will not be visible on pages.

Once the custom sidebar has been added, you can find it via **Appearance -> Widgets**. Feel free to add any widget to the custom sidebar.

To display the certain sidebar on the page, please open that page and choose any sidebar from the drop-down menu in **Page Settings -> Page Layout**

You can manage all those elements in Elementor, please choose the section where those items are located and find HTML or Image elements using navigator tool. Simply replace them with your own ones.

15. Translation Support

If you want to translate the website into your language, we recommend you to use Loco Translate which can be officially downloaded at <https://wordpress.org/plugins/loco-translate/> as well as to get official support.

In case, if you do not want to use any plugin, the theme comes with the translation files:

/themes/ewebot/core/languages/ewebot.pot
 /plugins/gt3-themes-core/languages/gt3_core_elementor.pot

Step 1 – please download this software and install it
<http://www.poedit.net/download.php> (<http://www.poedit.net/download.php>)

Step 2 – please open .pot or .po file using poedit tool and translate the existing text to your own

Step 3 – when you save the file, you must name it according to your language

Step 4 – upload the file to the required folder on your server, that's all

16. FAQ

17. Support Desk

Before seeking support, please...

- Make sure your question is a valid Theme Issue and not a customization request
- Make sure you have read through the documentation and support forum topics

- Try disabling any active plugins to make sure there isn't a conflict with a plugin. And if there is this way you can let us know
- If you have customized your theme or use the child one and now have an issue, back-track to make sure you didn't make a mistake

Support for items includes:

- Issues arising from using any of the packaged theme features
- Bug fixing
- Any other theme-related issues

Item support does not include:

- Customization and installation services
- Support for third party software and plug-ins

Occasionally we will help with small tweaks, but these requests will be put on a lower priority due to their nature. Support is limited a time period according to Envato's (Themeforest) changes issued on September 1st 2015.

You can find more official information here:

http://themeforest.net/page/item_support_policy(http://themeforest.net/page/item_support_policy)

[http://marketblog.envato.com/releases/item-support-policy-and-functionality-](http://marketblog.envato.com/releases/item-support-policy-and-functionality-launched/)
